

# EXPLORE

## 4K MOVING MAP

### Plug-and-Play Map Replacement

Powered by FlightPath 3D

#### NEXT GENERATION 4K MAP SOLUTION

The CMS Explore product line is available as a plug-and-play replacement solution and provides a hands-free automatic broadcast view on bulkhead monitors, as well as an interactive experience on personal entertainment devices.

#### FOLLOW YOUR AIRCRAFT AND FLIGHT IN 3D

Follow your flight progress while immersed in an interactive 3D world with full gesture controls.

#### AMAZING VIEWS

With virtual reality, take in the pilot's view from the cockpit Heads up Display, Window Views and Aircraft 360 to rotate the aircraft and see the model details.

#### 50,000 POINTS OF INTEREST

See what landmarks you are flying over with pictures and facts set against a distance and direction display. The auto-play feature moves through all the Points of Interest below you.

#### FLIGHT INFO

View flight data as the aircraft travels along its route. See altitude, speed, distance to go, direction to your destination, and other pertinent flight information.

#### BULKHEAD MONITORS AND AUTOPLAY

Follow your flight progress, see what's below you now and scheduled arrival time in a hands-free automatic broadcast view.

The Explore solution offers three options with customizable, 3D maps that support Composite, HD-SDI (1080P), and HDMI out (4K60) to ensure the highest quality moving map experience for both principals and passengers alike. In addition, the software's ease of use and set up for MROs has a much quicker turnaround than previous map products.
